I. INTRODUCTION

- Earth and other planets or asteroids and constellations are integral parts of the Sun. Rahu (north lunar node solar eclipse) Kethu (southern lunar node, lunar eclipse) lagan (ascendant) is also an integral part of the Sun.
- The planets are moving from one direction to the other, and are trapped in the sun. The sun's domination restrains them from moving again. This is why colorful planets look different.
- Colorful planets that is entertaining because they have different planets and come with moving planets, so different kinds of life or living organisms. They are equally challenging to the humans.
- There are also different planets orbiting humans as well as other life forms in the cosmos as well as other
- Planets orbiting humans. Back to their preferred location.
- Planets only a few planets, such as the Sun's prime organs, are taken into account. The rest of the planets are not integral parts of the Sun.
- Planets, asteroids, and asteroids are being created in the same way that climatic life is taking place in our atmosphere. But there is one lord of the respective planets that is created. Like a father mother for kids.

- They are integral parts of the respective planets. As we have seen the diversity in life forms in terms of soil quality on the planet, we are also seeing diversity on the planets. New planets are being created in a similar climate. But the planets are not created from the same particle at the source. Even in the same way as man, there are different types of planets, asteroids, etc.
- Compared to the people of China and the people of South Africa and its climate, there is a different climate and ancestry. But one of them is different in intelligence than the other. Because of the climate in the respective countries and sectors. Also, Earth, Mars, Mercury, Venus or Jupiter will be created according to the climate of the solar system. But they are not separated from other planets. Separate planets do not appear.
- Solar orbit must be studied intensively before the solar system is created from a single particle, or before the philosophy is revealed. All that is seen here is pure magic. In that illusion, the physical elements were created. From this illusion, the solar system and planets, asteroids, and stars are created. Just as the tree is created from the seed, the world is created by the particle. In reality, some life forms and plants are being created from the illusion of the soil.
- Piles (living organism) of life do not appear everywhere on our land. This is due to the fact that the soil fertility of the organisms is causing the climate to rise. Different parts of life can only be found in certain areas. The reason is the soil and the climate. There is a kind of climate in the country China, and a kind of climate in the West Indies. The climate is fluctuating compared to the climate of both countries. There is a variety of life there, similar to that climate. Similarly, Mars or Jupiter in the solar system will be difference (enemies) different.

- The Moon is an integral part of the Earth. But the moon is not separated from the earth. A moon can be called a species of earth because its movement is so close to Earth. Once the moon is separated from the Earth, there is a significant difference between the Earth's climate and the Moon's climate.
- If the environment and climate of the pregnant woman was not good it creates Problems usually arise if she is staying in her environment, there is difficulty in breathing or fetal development. Similarly, there is a problem with the growth of biomass or the molecules there on Earth or any other planet.
- We call it the absence of offspring (barren). And each person is like a planet. There are both males and females. If the both male and female chromosomes were mixed, however, are left infertile if they are unable to produce offspring (barren). But infertility can be eliminated by scientific technique or by God's will. The title of infertility of female can be eliminate, the living offspring grows. Similarly, planets, even if they are soil-related, are unlikely to grow in a variety of life forms. Possible on some planets. In many places on Earth, even in other climates, the lack of climate is a barrier to life there is no house or planets with no children or germs. For example, some invisible forces are visible to the camera eye. Unlimited powers are not visible yet. In such examples, God is not visible to the camera.
- This is a challenge. When the camera is turned on to the idol statue on the way to the temples, neither the god nor the shape of the image is not visible to the camera. Similarly, alien planets are invisible. Not appearing. Otherwise, he is annihilated and annihilated planets that are infertile.
