

The God Theory: Universal Theory of Relativity and Natural Philosophy

SUHAIL IBN SHAHNAWAZ

Conceptual Research Scholar of Relativity and Natural philosophy. Author of the God theory, Mind philosophy. kulgam Jammu and Kashmir, India

Abstract- The present research paper titled as the God Theory: Universal theory of relativity and natural philosophy. The researcher introduces the concept The beginning of universe through the notion of realms and introduces the concept about the photons, how light travels through space. The researcher highlights Albert Einstein's theory of relativity, special and general and in addition to these he introduces the notion about the existence of the universe. How light acts and what is the cause of the beginning of the cosmos and about the nature of space. The researcher develops the conception about the existence of one of the fundamental forces, Gravity, which was proven an effect by the general Theory of relativity. The existence of creation and the phenomenons executing the universe which introduces the concept of time and what is the coordination through which time senses its matrix. The researcher develops the intelligence of mankind through the notions of the dimensional analysis of cosmos and existence of the multi-dimensional intelligent creation. The main argument is how the photon acts as the intermediate for the electromagnetic force between the electrons and what was the notion about the quarks and nothingness. The main focus of the researcher is how the creation executes the effects on the universe and what was the curse to stabilize the inanimate matter in the universe. How the whole particles and their spins are interconnected to each other and what was the secret about the beginning and the violent mortality of creation. The Researcher develops the notion for the unification of conceptions to describe the creation uniquely.

I. INTRODUCTION

The beginning of the creation is the main notion from the earlier civilizations to develop. A number of smart brains develop their notions through the purpose to

know the truth about the geometry of the universe. I literally believe that to know about the truth of the universe mankind has to know about the geometry of the source of signals executed from the spins of the particles of the universe. To know about the reality of the creation we have to develop our dimensional analysis.

I worked and re-researched all the theories which are related to the creation and the universe! Either is it the beginning, existence or mechanism, occurrence of phenomenons in the universe and why? All the notions begin with the concept of the existence of the universe! Every signal has a conception about the beginning, so, as the view of the modern definition universe began from a Primeval atom. And if the whole universe exists from a unique point at the same time and from a single process or event then it means that every particle, even subatomic particles are related to each other. There is the matter or matter of notion yet which humans don't have experience yet but connects the whole human exposures. As we are living in a three-dimensional space and fourth dimension as time, but is nature telling us something else as centuries and centuries goes in past but we still doest experience what the fundamental dimension is! Is time! It seems time is an intelligent dimension which measures itself on its own as the fundamental dimension and with accuracy time is congruent to itself. Now, what time is and how it came into being is the ultimate question of mankind. As our visualisation about this universe satisfy our own belief. The concept we are going through that going backward in time gives us an introduction about the beginning of universe. But these all concepts are not much satisfied. We are not able to go backward in time, in other words we can call it dance backward forward in time. We have to understand here that we have to take the event backward to take our notion to the beginning but our laws, conceptions whatever! Will stop to satisfying, As we are creation and our

normal visualizing limit does not cross the limit of existence. As we go through the past theories as the physicists are believing on these theories and are presently accepted globally, we should think where this space was and if there was a primeval atom with infinite space-time, where the space-time itself was! Is there any existence already before the big bang! How much percent is the creation of God which belong to ours. Taking a back look into the events it seems the whole existence will eventually coming interconnected with more symmetry and accuracy. And the connection between the matter is getting stronger and creating a stronger congruent puzzle! God is not playing dice, But God is playing top with universe. But as a no boundary interpretation I want to clarify an idea with you that space, cosmos or our universe is limited and is just a bud or part of a pre-existing universe! Nad we are just examining the existence of our universe upto which our visualization and our exposure works. It is Necessary for us to know the perspective of creation and get a little bit about the preexisting universe. We are three-dimensional creation and the psychology of mind is developed in that way. Time is Fundamentally the existence of creation for the mankind. The belief we are growing through was always satisfying to us, But there is a pre-existing universe much massive than the one mankind is exploring. The universe we are observing is just a blink of creation. The universe is expanding and we are observing it just in the state of expansion. As in the going time the human kind is observing of the expansion of space which we are experiencing at the three dimensions here I am not concepting about the time. As there are number of assumptions I have worked on, As taking the notion of events in backward and I believe they are predicting the beginning. Just these notions doesn't draw a fundamental picture of primeval atom. Universe and creation has a perfect order and perfect principles to go through. It seems in an ordered incidence. Mankind calls that nothing can not be something, But non percent of the creation knows what actually Perspective of nothing is. Number of people lead with a misconception that where something does not exist there is nothing. But for mankind to clear the notion I here want to describe the conception that nothing consumes something, which itself is nothing, For the normal and on daily bases it seems like an annoying statement. But, I will explain it!. I was a bit possessed by the belief of the

gods' mind and philosophy about the inanimate discovery of the universe and I interacted with the signals from the creation to hold a Perspective to examine it. It was very hard to create an environment and go through such thoughts when the man kind is under the line of estimate in the field of exploring ideas. This whole we are exploring in space, cosmos is inanimate but interconnected with in the psychology of space. It is not an ordinary notion to explore and predict the design of creation or creation itself. But a mind which gets intention and get the source from the signals from the creative principle to design the fundamentals about the universe. While researching about the cosmos I thought space is an interesting and ordinary subject taken by the postulates. We have to take a fundamental and great thoughts and examination to describe the space with approximate notion. I already have the blink of conception about the term nothingness. It is just our intelligence which is not developed enough to experience the existence of nothing. There is the unique fundamental source of creation from which the existence of nothing belong to. We believe that our universe is billions of billions years old. The term old here, Arises again the Exclamation how the time works. Why the universe doest began before the beginning of it self! Is there any process or event which was processing to cause this event of beginning of our cosmos! if ? What was that! And if there was nothing there before the primeval atom then what was then there and what was happening before! The concept which is nothing for us is something for someone intelligent enough more Intelligent from mankind!. As, whole the the matter of the universe lies in the rounds of string on which we are focusing on but the space inside the circular boundary, we create illusions about that. I already mention above that our universe is just a blink of creation created from pre-existing universe. As the force on the boundary doesn't allow it to over-cross. Force on the side of pre-existing universe increases and cross-over the limit from a single point. Here the conception to clarify is that the pre-existing universe has much energy than ours which executes in curvature. Now when the energy crossover the boundary is extending over. Time from mankind and from the observations began from the event as mentioned primeval atom postulates. This was not the solution of the notion of time, Time for mankind is the fundamental dimension and is the way to know about

the existence of the universe. After the stabilization of the executing energy on a particular place in space with mount amount of energy, gained from the event of pre-existing universe, now starts executing on the other side of the cross-over begins that indicates the execution of energy now starts the state of expansion, As the tip round of the spring expands with the most amount of energy to go far, Followed by the round and round and round.

Every matter in the universe must be made up of the same basic (element) particle, but the energy levels of the particle must be different. So, the last tip must go with the more energy and more distance and with more propulsion power. So, the energy or any type of force arise from the matter must be executing in curvature. And the levels of energy is executing more with those particles which are interconnected in maximum quantity. Every particle has own effect of force executing in curvature, so if we focus on the beginning time of the event the whole particles are interconnected and and executing the effect in a same way. As I want to clear hear that in the beginning there was not any physical matter but the whole event was in the form of energy. As we know that in the beginning there was hydrogen gas so it gives us a Clarification that the Executing effect has the basic element hydrogen which executes, As in the beginning the effect executes with more energy and propulout the particles with maximum effect. So, it means the kinetic energy of the particles which move first out of the event was a lot, that means the temperature of the event at that time must be enough. As the particles start moving out, the expansion rate increases and they left their relaxation state. This whole process takes a lot of events to happen and their will be exchange in the energies as the energy of relaxation start decrease, The temperature of the event came down.

The factor behind the existence of the universe is the effect of the interaction of the elementary creation though these effects are what we called as the fundamental forces. We believe these are the forces to execute the interaction between the particles for the existence and matter. How they execute! What is the range till they execute! What is the nature of these fundamental forces?. As gravity is not a force as per the conclusion of the theory of relativity, but an effect due to curvature of spacetime, we take this among the

fundamental force as we cannot obtain gravitation from any other force. And electromagnetic force, strong nuclear force and weak nuclear force. How the matter communicates or interacts with each other are the reasons. And the communication or interaction caused by these forces are due to their particles came into being due to their effect which we called as force carriers, Messenger particles or intermediate particles. Shortly I want to give an introduction about the force carriers of their fundamental forces. As photons are the force carriers for electromagnetic force like the interaction between the electron and proton is caused by the photon which acts as the messenger particle between them. After the word photon you must think about light, I will briefly explain this notion next. Gluons for the strong nuclear force which act on protons and neutrons in the nucleus also have negligible mass. I already mentioned that the whole matter in the universe is formed of elementary particles and to know there reality we have to know about their geometry and the reality of their nature which we can calculate through the property of their spins. which notions us about the coordinates of the particle and how it seems in the universe. Like electrons protons have spin $1/2$. photons, gluons and bosons have spin 1. This gives us a brief description that the whole particles constituting matter has fraction kind of spin and the particles which execute them have spin like 0-1-2. The concept I want to introduce here is the photon acts as an force carrier for electromagnetic force like it acts as an intermediate particle between electrons and develop the force of electromagnetism there. As the elementary particle known is quark which forms electron and other particles. Electron has three quark varies in types. There is the notion I want to introduce. The photon particle reaches us through the process as it reaches us like an intermediate particle passes from particle to particle to carry the force of electromagnetism and reaches us with constant speed. The whole universe is develop from the quarks, Quarks are itself located on a position called as granions and they are hollow to the basic particle and show some Vacant space for the basic particles and act like a boundary for them. Their mass is negligible but the dimensions will change when the body with extra mass surround it. These are the particles filled the nothingness and vacant space for massless like particles. photon travels through these space as the electrons and protons are massless pass

the Interconnection through them and travel on as the geometry of every electron is same so the coordinations Or what we call as time will be same. I already mentioned the term granions so the photon particle will effect if the effect of force is strong enough. As the fundamental forces arise from the motion of spins so the reason behind the interaction in the creation of universe is spin or motion, Gravity is developed from the same effects as the motion of the spins is greater the execution of gravitation is greater. like the body with heavy mass spinning with low speed must as lesser gravitation than a body with lower mass spinning with high speed. The event of eclipse is cause by the same effect of the granions. It is not mass effecting space but it is the motion through which the dimensions of granions effects and develop the execution of gravitation. As the concept of space time curvature explains the geometry of space but doesn't allow it's laws to execute on the black holes, singularities and on the beginning of universe when the space time curvature was infinite. But the concept of granions is explaining the events in a basic way. Now the notion of time begins here as I want to introduce the explanation of what time is. How gravity executes in the universe the notion is beginning with This model explains the whole anatomy of the big bang. The travel of the sun at the center of the solar system and the movement of planets and other massive bodies like a spring. The spring explains the force and the direction of massive bodies. What happens if the planets and the sun are at rest just not moving! There will be no gravity to experience. But what happens when they start vibrating (Motion/rotation etc) there atoms. Then the experience of gravity is for sure.

- How the string work's!

In space gravity is nil, but what happens when a massive body is launched in space! Force of gravity arises there. The force acts on the body is the force produced from the string's which arise from the origin which means from the center of the core of God's mind which we call as the core of sun.

During the beginning of the universe it is not just the big bang which happened and gave birth to the universe but it is the expansion of the string with all the bodies present in the cosmos. What will happen with the universal gravity string! If it will take the phase of relaxation then all the direction that happens

in the cosmos will take an anti-process. The great thing here is direction's will all take a chance. Then the idea of space time arises! Here what I got is there is no difference between the time direction and direction of space. But the thing is in the real space time, in which events are labeled by real values of the time coordinate it is easy to tell the difference. The time direction lies within the light cone and space direction lies outside This is the model which explains it all."I named this notionas 'model of universal gravity string'"

PARALLELIZATION OF TIME IS MY ONE OF THE MAJOR CONCEPTION TO KNOW GOD'S MIND.

To know the law of nature I must have to know the mind of God

Hawking was approached there but ended with an incomplete theory.

Such things are extracted from nature itself and I did with it. Before our universe was created there was something that had happened to have created the universe. The big bang theory was a major part of why the universe was created. There are so many things that had to be contributed to the big bang theory. We don't really know what will happen to our universe in the future but we can make predictions about it and we can use evidence and justifications to predict what will happen. The Big Bang Theory is the leading explanation about how the universe began. As every physicist knows!

The sun, although it is in the middle of the Earth's orbit, it is not in the exact center of the Earth's orbit. The distance of the Earth from the sun varies as the Earth revolves around the sun. At its closest point the Earth is about 91,000,000 miles from the sun, and 95,000,000 miles from the sun at its farthest point. This makes the mean distance of the Earth from the Sun about 93,000,000 miles. What may seem strange to people in the Northern Hemisphere of the Earth is that the Earth is closest to the sun in the winter and farthest from the sun in the summer. But what is the gratefulness of sun is it is the base of nature and the laws of nature which lies in the core of God's mind. The great this about the parallelization of time is it operates in an empty space. The concept of Albert

Einstein about the space time curvature (in simple word's MATTER TELLS SPACE HOW TO CURVE AND SPACE TELLS MATTER HOW TO MOVE). But the thing here is there happened some great bad things with time. The concept of time arises from here is "Time is relative" ALBERT EINSTEIN which violated the Issac Newton's concept about time "TIME IS ABSOLUTE" ISSAC NEWTON BUT THE THING IS WHAT HAPPENS TO THE TIME IN SINGULARITY and what will happen with time at the corner of universe if we found it! What happen to the processes if we experience them all in these space's at the same time. The possible way to experience this is if we can take travel through a black hole. Which is still possible?

Here are the words of Albert Einstein's work "LOGIC WILL GET YOU FROM A and B BUT IMAGINATION CAN TAKE YOU EVERYWHERE" So, let's take a trip to space and black hole. What happens with time while traveling in space! The concept here is the body is traveling through an empty space that means parallel to the time as the concept is mentioned above. Then now take a trip of black hole! What happened!

The belief arise here is the body is going away from the empty space or parallelization of time. The value of time for the body will decrease not because of time as mentioned in 'general theory of relativity' but because of the fairness of body from the parallel time and the body experience difference in time as compared to space.

So, time is neither relative nor absolute!

Time is Relatively Absolute

* Double spectrum of nature*

'Suilbts death constant'

Death is placed in the core of God's mind where the double spectrum's Collide to vanish existence.

Explanation of a star collapse to form a black hole (death of star to form a back hole) Each observer has his own measure of time. The time for some one on a star having absolute space and someone at any distance with absolute space will experience the same event at different relative times. Experiencing this event from at the center of the same star where this event happens is the process of Relatively-absolute time. Where the time is absolutely relative with the process with absolute space.

THE Beginning of universe gave birth to billion's if natural processes then the concept of death arises there.

Where $T=0$

And $DPT=0$

Just if a body fall's in the wormhole and avoids hitting the singularity and comes out in the other region of the universe.

This form will give birth to a "double spectrum of nature".

This form of spectrum can take place in 'nill space' Represented as " \int " Called as sailboats death constant. This spectrum is just like the death of a star and the beginning of black hole.

Where $T=\infty$

And $DPT=0$ or ∞ .

"TIME THE FACTOR OF NATURE"

Time operates just like an align arrow that leads with the increase of entropy with time which I called as Time Align. There are Four Align's of time.

First is in which the entropy of time increases and leads Towards the approaching (FUTURE). Second is in which we the universe has notion of time leads to existence, Third is The Suilbts Time Align which leads to the existence of core of God's mind and fourth is the existence of time itself which I called as God's Time Align

CONCLUSION

In the present research paper researcher has concluded the notions of the unification of conceptions about the universe. The gravity is not an effect as per the notions introduced in the mentioned paper. The cause of Eclipse as we are able to sight the stars behind the sun is not due to curvature of spacetime, but due to the

change in the geometry of dimensions of the granions, Granions are the particles of nothingness as the researcher mentioned in the paper. Time is an intelligent dimension and congruent to itself and is not relative but relatively -Absolute. The researcher mentioned the execution of creation is in the spiral nature. The elementary particle quark is itself bounded in a boundary of nothingness known as Granion.

Suilbts death constant and the philosophy of time the philosophy of God's mind to create the universe.

Time doesn't slow down near heavy objects neither at higher speed as Approaching to the speed of light but time changes it's Relativistic value with the space at any absolute position in the plane. Parallelization of time with space cause the change with the dimensions of the matter observing it. There's only one beginning point of the universe which researcher called as the ultimate singularity.

Intelligence has a source and mankind's basic creation interacts with the signals from the source. There are multidimensional intelligent creations executing with the truth.
